What they say they want:

- A game website
- A Home Page
- Consoles Page
- Suggested Games Page

What they need:

- A responsive website that will allow the users to navigate around and view games from different consoles, also a page where users can view other peoples suggested games and add their suggested games.
- A navigation bar that will allow the user to navigate around the whole website no matter what device they are on.
- A Home Page with details on what the site is about and how it aims to improve any gamers experience when deciding what game to play next.
- A Page for each console (PS4, Xbox One, Nintendo, PC) listing exclusive titles to that console users maybe did not know about.
- A suggested games page, this is the main part of the site. Here users will be able interact with each other and interact with the site. They can locate suggested games, add games of their own, edit their games and delete unwanted games.

What they don't know they need:

- A page where users can upload their own gameplay of them playing their suggested games.
- A leader boards page where users can challenge each other to beat people's highest score.
- More gaming consoles added to the console's pages. Some retro gaming consoles for all the retro gamers out there.
- A competitive page so users can create their own teams and compete against one and other.

User Stories:

Scenario: The user wants to know more about the site.

Requirements: The user should navigate to the site and as soon as the page loads, they will be hit with a home page with details on the site and what its goals are for the user.

Scenario: The user wants to know the best exclusive games for a certain console.

Requirements: The user should navigate to the console section in the nav bar this will have a dropdown menu where the user can choose a console of their choice, once they have chosen they will be taken to that page where they can see a list of games that are exclusive to that console.

Scenario: The user wants to be able to see other peoples suggested games when they visit the site.

Requirements: When the used loads up the home page they will be able to see a little section explaining what the site is about and there will be a button at the end of this section that will navigate the user straight over to the suggested games page. Also, there will be a suggested games section in the nav bar the user simply just has to click one of these links

Scenario: The user wants to be able to add a game to the suggested game section.
